Sun FX Before and Post Airbrush Tanning Protocols

Before we do the custom airbrush tanning-

- Take a shower
- **Must Exfoliate** your skin
- **DO NOT APPLY ANY LOTION OR CREAM before the tanning**

A substantial tan will develop within 2 hours after the application. However, for best results, SunFX recommends to not shower or bath for at least 5 hours after. Optimum result is to wait at least 8-10 hours and avoid water or sweats.

- Avoid touching your hands to your body because, although the spray feels dry, it **will** come off on your fingers and hands and they **will** end up brown.
- Avoid rubbing and try to prevent perspiring if possible.
- Avoid close personal contact due to chance of rub off.
- As you go to sleep be aware of where your hands are. Make sure they do not rest on bare skin as they **will** perspire and you **will** end up with a brown palm.
- In the morning when you may wake with your face being very brown, **do not panic!** When you shower your face will go back to a light golden brown and do not use any type of exfoliating product such as scrubs, loofah, mittens, towel on your skin.
- Due to the bronzer you will find the water will go brown in the shower. This is normal as you are just seeing the excess bronzer wash off. It is definitely not your tan but only the bronzer.
- Avoid crossing your ankles.

Extending the Life of the Spray Tan

- Do not exercise or perspire excessively between the tanning and the showering phase (5-10 hours). Avoid getting wet during the processing phase.
- Pat dry after a shower.
- Apply a moisturizer twice daily after showering will significantly extend the life of your tan. SunFX extender is the perfect product to moisturize and extend your tan. Moisturizer hydrate the skin and so will reduce the rate at which the skin naturally exfoliates and will keep the tan looking better for longer.
- Avoid long baths, saunas, steam room and swimming sessions (chlorine can remove spray tan application very quickly).
- Avoid salt water, chlorine and very hot water
- Avoid products designed to exfoliate your skin towards the end of the life of the tan around 5 -10 days after.

The SunFX spray-on tan formula **DOES NOT** provide any sun protection and **DOES NOT** contain sun screen. You must apply sunscreen to prevent sunburn when outdoors. Burning the skin and peeling will leave major cosmetic effects to the tan plus the eventual damage to the actual skin for the sun rays.
